PFH 26
PH 26

Original instructions
1. Apply GREASE to the drill bit.

2. Insert the SDS-plus drill bit into the drill and ensure it is securely seated.

TEST: Ensure the drill bit is functioning correctly by attempting to drill into a material. If it clicks, it is functioning properly.
The declared vibration emission level represents the main applications of the tool. However, if the tool is used for different applications, with different accessories or poorly maintained, the vibration emission may differ. This may significantly increase the exposure level over the total working period.

An estimation of the level of exposure to vibration should also take into account the times when the tool is switched off or running but not actually doing the job. This may significantly reduce the exposure level over the total working period.

Identify additional safety measures to protect the operator from the effects of vibration such as:

- Maintain the tool and the accessories to prevent wear.
- Use auxiliary handles supplied with the tool.
- Use gloves, sturdy non-slip shoes, and a suitable dust mask when using the tool.

WARNING

The vibration emission level given in this information sheet has been measured in accordance with a standardised test given in EN 60745 and may be used to compare one tool with another. It may be used for a preliminary assessment of exposure.

The declared vibration emission level represents the main applications of the tool. However, if the tool is used for different applications, with different accessories or poorly maintained, the vibration emission may differ. This may significantly increase the exposure level over the total working period.

An estimation of the level of exposure to vibration should also take into account the times when the tool is switched off or running but not actually doing the job. This may significantly reduce the exposure level over the total working period.

Identify additional safety measures to protect the operator from the effects of vibration such as:

- Maintain the tool and the accessories to prevent wear.
- Use auxiliary handles supplied with the tool.
- Use gloves, sturdy non-slip shoes, and a suitable dust mask when using the tool.

SAFETY INSTRUCTIONS

Do not use diamond core drills on hammer mode.

Wear ear protection when impact drilling. Exposure to noise can cause hearing loss.

Use auxiliary handles supplied with the tool. Loss of control can cause personal injury.

Hold power tool by insulated gripping surfaces, when performing an operation where the cutting accessory may contact hidden wiring or its own cord. Cutting accessory contacting a “live” wire may make exposed metal parts of the power tool “live” and could give the operator an electric shock.

Appliances used at many different locations including open air may result in electric shock, fire and/or serious injury.

Save all warnings and instructions for future reference.

SPECIFIED CONDITIONS OF USE

PFH 26: The rotary pneumatic hammer can be used for hammer drilling and drilling in wood, metal as well as plastic.

PH 26: The rotary pneumatic hammer can be used for hammer drilling, chiselling in stone and concrete and drilling in wood, metal as well as plastic.

Only plug-in when machine is switched off.

Keep mains lead clear from working range of the machine. Always lead the cable away behind you.

When working in walls ceiling, or floor, take care to avoid electric cables and gas or water pipes.

The dust produced when using this tool may be harmful to health. Do not inhale the dust. Wear a suitable dust protection mask.

Under the effect of extreme electromagnetic interferences from the outside, temporary variations in the speed of rotation could arise in particular cases.
EC-DECLARATION OF CONFORMITY

We declare under our sole responsibility that this product is in conformity with the following standards or standardized documents:
2006/42/EC, 2004/108/EC

Winnenden, 2011-11-14

SYMBOLS

Please read the instructions carefully before starting the machine.

Always disconnect the plug from the power supply socket before carrying out any maintenance work on the machine.

Accessory - Not included in standard equipment, available as an accessory.

Do not dispose of electric tools together with household waste material! In observance of European Directive 2002/96/EC on waste electrical and electronic equipment and its implementation in accordance with national law, electric tools that have reached the end of their life must be collected separately and returned to an environmentally compatible recycling facility.

Class II construction, tool in which protection against electric shock does not rely on basic insulation only, but in which additional safety precautions, such as double insulation or reinforced insulation, are provided.

MAINSA CONNECTION

Connect only to single-phase a.c. current and only to the system voltage indicated on the rating plate. It is also possible to connect to sockets without an earthing contact as the design conforms to safety class II.

MAINTENANCE

The ventilation slots of the machine must be kept clear at all times.

Important note! If the carbon brushes are worn, in addition to exchanging the brushes the tool should be sent to after-sales service. This will ensure long service life and top performance.

Use only Milwaukee spare parts. Should components need to be replaced which have not been described, please contact one of our Milwaukee service agents (see our list of guarantee/service addresses).

If needed, an exploded view of the tool can be ordered. Please state the Article No. as well as the machine type printed on the label and order the drawing at your local service agents or directly from Milwaukee Australia (Toll Free Telephone Number 1300 361 505 Email Milwaukee@ttibrands.com.au) or Milwaukee New Zealand (Toll Free Telephone Number 0800 279 624 Email Milwaukee@ttibrands.co.nz).
